Scott stamp catalogue pdf free download

Every year, Scott Publishing The company produces a catalog of American and foreign stamps that list estimated values for each number and labels each with a Scott number. Collectors use Scott's numbers to identify specific stamps when they buy, sell or trade philosophies, and to easily organize their collections. Each stamp issued by a country has its own specific number. What is the idea behind this exclusive Scott numbering system? It's very simple. First of all, each stamp is assigned with its number. Second, special items are marked with the corresponding capital letter such as B for semi-postal stamps or C by air mail. Of course, this traditional system can be changed if more than expected stamps appear or due to some minor variations. In this case Scott will add a capital letter as suffix or use the strategy to rename stamps. Minor variations, such as shadows or errors, get a tiny character. Additional descriptors include emission date, illustration number, denomination and color. The illustration number is related to the actual drawing of the stamp, minus the name and color, and a photo example of each drawing can be found on the page of each Scott catalog. It should be noted that the Scott numbering system is unique for this reason the company has claimed copyright on it. In addition, the system has a high commercial value. Scott catalog editors are very powerful figures in the world of philosophies. It is explained by the fact that they have the right and a great influence on what should be considered a valid stamp. Editors may refuse to include some stamps in the catalog so that the Philistines will not be able to add them to their collections. Some recent years such problems may emerge in the catalog provided that thecopies appeared on the market. The stamp which is not in a Scott catalog is deprived of its value and the philatelic interest. In case publishers cannot get the copy of an interesting philtheic element, it isin the catalogue without the value. For example, it happened with stamps from embargoed countries and the United States government. The popularity and usefulness of a Scott catalog is demonstrated by the fact that many stamp collectors know some of its numbers by heart and merchants just have to mention the number of stamps in their price lists. For example, Inverted Jenny is widely known in the philosophies field under the number Scott "C3a". The Scotts are issued separately for each country and the stamps in them are listed in alphabetical order. Note that a catalogue does not offer philanthropic items for sale or any trading purpose. It only provides collectors with useful information that can be used for certain philanthropic purposes. The Scott Catalogue is a highly respected authority that was the first to offer the yarn makers a comprehensive and detailed identification system for collectors from all over the world. A stamp should respond to a long list of criteria to be approved to be listed in the Scott Catalogue. Occasionally, the company decides that a particular problem does not fit their criteria and declines to list it even if the problem is valid for shipping. A recent example is the imperforated print sheet released by the United States Each Scott catalog is edited and produced every year so that the information is regularly renewed. If you are devoted collector of professional stamps you cannot do without this special philosophic literature. Then, browse the web and check every edition of the annual Scott catalogs. The Scott Cataloguestamps, published by scott publishing co, is updated annually with hundreds of thousands of changes and lists all the stamps of the whole world. From a 24-page pamphlet, the multi-volume set now lists more than 700,000 stamps from 600 different postal entities. Due to the size of each volume, the 2021 edition has each volume divided into one part A and B. So when the purchase is getting the A and B part volume set. Scott Publishing publishes a total of eight large volumes that include six volumes containing all countries of the world, the U.S. Specialized Catalogue, and the 1840-1940 Classic Specialized Catalogue (world cover for the first 100 years that have been issued stamps). The numbering system used by Scott to identify stamps is dominant among stamp collectors in the United States, Mexico, Canada and across the world.
